

ADP Network Solutions

# GetWired™ Internet Manager

Protect your dealership by controlling Internet use

## ADP Network Solutions

- GetWired™
- GetWired™ Internet Manager
- GetWired™ Remote Access

Control the sites employees visit, protecting your dealership network, and keeping non-productive Internet use to a minimum.

GetWired Internet Manager is a comprehensive solution that lets you block access to certain types of websites, like adult content, gambling and music downloading. Internet Manager also gives you reports on when and how the Internet is used in your dealership. By controlling Internet use to business-only sites, you can protect your dealership and help keep your network secure, and at peak speed.

GetWired Internet Manager is an employee Internet management solution that allows you to monitor, manage, and report on dealership Internet usage. This comprehensive tool seamlessly integrates with the GetWired high-speed network firewall solution:

- Help keep your dealership network secure by limiting access to only business-related sites
- Reduce exposure to Internet viruses
- Optimize bandwidth by restricting non-business-related web access and downloading
- Minimize non-productive employee Internet use

## How Does Internet Manager Work?

Internet Manager uses Websense®, an industry leader to enable real-time monitoring, blocking, and reporting of Internet usage. Millions of sites are monitored and scanned to block websites before they become a problem.

You can:

- Block or permit access to individual web page categories, including music downloading, gambling, shopping and adult content
- Set up access by user group, department, workstation, or by time of day
- Limit download of bandwidth-intensive files
- Block banner advertisement and instant messaging with Advanced Filtering

### How Does Internet Manager Work? *(continued)*

GetWired Internet Manager provides comprehensive, easy-to-use reporting tools to help you analyze Internet usage and proactively identify Internet access or network bandwidth issues. You also have the capability to monitor Internet usage as it happens to correct a potential problem or block Internet access in real-time.

- Generate Internet activity reports to identify non-work-related website access
- Customize and schedule reports to meet individual dealership needs
- Easily change, add, or delete users from anywhere Internet access is available

## ADP Network Solutions – A Complete Suite of Network Security Offerings

### GetWired

ADP's GetWired is the foundation for protected access to the Internet. This complete network security solution includes business-grade Internet connections, powerful security management tools, and responsive technical support.

### Internet Manager

GetWired Internet Manager frees up bandwidth for Internet usage, boosts employee productivity and protects you as an employer by allowing managers to control and track Internet usage and restrict access to web content deemed inappropriate for a work environment.

### Remote Access

Provide secure, reliable access to your dealership's network for offsite employees, telecommuters, vendors, or consultants with GetWired Remote Access Virtual Private Network (VPN).

By combining our two companies, PFW and ADP can now offer the largest and most comprehensive selection of products and services to equipment dealers worldwide. These cost-effective, leading-edge solutions have been developed by ADP to help grow your dealership business. Backed by ADP, you can expect the same quality and reliability you have come to expect from PFW.
